

# AI for Educators – AI in Education Practicum

Capstone Code: CS\_AI\_M1\_1

**Name:** Abhishek Jain

**Designation:** Chemistry Foundation Teacher

**School:** Amrishbhai R. Patel CBSE School

**Subject:** Chemistry (CBSE)

**Classes:** Grades 6–10

## Topic 1: Understanding AI and Generative AI

Artificial Intelligence (AI) refers to computer systems capable of performing tasks that usually require human intelligence, such as analysing information, recognising patterns, solving problems and making decisions. Generative AI is a specialised branch of AI that creates original content including lesson plans, worksheets, quizzes, presentations and images. As a Chemistry Foundation Teacher at Amrishbhai R. Patel CBSE School, AI supports preparation of DPPs, Olympiad-level MCQs, lesson summaries and presentations. ChatGPT is useful for generating worksheets and explanations, Google Gemini helps compare concepts and gather supporting information, while Canva AI creates engaging visual resources. These tools improve lesson preparation and student engagement while remaining aligned with the CBSE curriculum after teacher verification.

## Topic 2: AI and Education

Artificial Intelligence has made teaching more efficient by supporting personalised learning, assessment preparation and lesson planning. It helps teachers generate differentiated learning materials and automate routine academic tasks. However, AI-generated content may occasionally contain factual errors, outdated information or explanations that are not fully aligned with the CBSE curriculum. Therefore, every AI-generated resource should be verified using NCERT textbooks and curriculum objectives before classroom use. UNESCO also recommends that AI should complement, not replace, teacher judgement. Responsible use of AI requires transparency, ethical practices and continuous teacher oversight. When used thoughtfully, AI enhances teaching quality while preserving the teacher's central role in guiding student learning.

## Topic 3: Reflection on the Use of Generative AI

ChatGPT, Google Gemini and Canva AI are valuable tools for preparing lesson plans, PowerPoint presentations, DPPs, worksheets, assessments and classroom visuals for Grades 6–10 Chemistry. If an AI-generated explanation is inconsistent with the NCERT syllabus or contains an incorrect chemical formula, it should be corrected before classroom use. Similarly, if examples are not age-appropriate or suitable for the CBSE context, they should be modified accordingly. Accuracy should always be verified using NCERT textbooks, CBSE learning outcomes and reliable reference books. AI serves as an instructional assistant that enhances creativity and efficiency, while teachers remain responsible for ensuring accuracy, fairness and meaningful learning experiences.
