

CS AI M1 for ‘AI for Educators’ and M1 for module.

1.Understanding AI and Generative AI

Q. 1 Define AI and Generative AI with examples. Explain the applications of AI in the education sector.

Ans – 1. Artificial Intelligence (AI) is changing education by helping students learn according to their needs, reducing teachers' routine work, and making teaching and learning easier and more interesting.

2. Generative AI (GenAI) is a type of Artificial Intelligence that can create new content such as text, images, lesson plans, quizzes, presentations, and other learning materials based on the instructions given by the user.

The applications of AI in the education sector - It include creating lesson plans, quizzes, notes, presentations, images, and practice questions. It also helps teachers save time and supports students with personalised learning and better understanding of concepts.

3. Teachers use Generative AI to create lesson plans, quizzes, worksheets, and presentations quickly.

Students use Generative AI to understand difficult topics, summarise notes, and generate practice questions for exam preparation.

2. AI and Education

Q. 2 Analyse the implications of the use of Artificial Intelligence in the education sector.

Ans - Implications of Artificial Intelligence (AI) in Education

Positive Impacts:

It helps students learn according to their needs and gives quick feedback. Teachers can use Generative AI to prepare lesson plans, quizzes, notes, and presentations in less time. AI also helps students understand difficult topics and revise for exams.

Potential Risks:

Students may depend too much on AI and stop thinking on their own. Sometimes AI gives incorrect information, so answers should be checked. It can also create problems like cheating, plagiarism, and privacy issues.

Examples:

Students use AI tools like ChatGPT to clear doubts and prepare study notes. Many schools also use AI-based learning apps to provide personalised learning.

Conclusion:

AI is a useful tool, but it should be used responsibly. It should support teachers and students, not replace human learning and creativity.

3. Understanding AI and Generative AI

Q. 3 Use any generative AI tool for an educational purpose, such as lesson planning, assessment design, research support, content creation, or learning assistance.

Reflect on your experience — did you observe any bias, hallucinations, or incorrect information in its responses?

If not, what steps did you take to confirm the accuracy and fairness of the output?

Why is it important for educators and learners to evaluate AI responses critically in educational contexts?

Ans - Steps to be followed to confirm the accuracy and fairness of the output -

Generative AI Tool Used: ChatGPT

Purpose:

- I used ChatGPT to prepare a Science lesson plan and quiz questions.

My Experience:

- It created the lesson plan and questions quickly.
- The content was easy to understand and useful.
- It saved time and helped me complete my work faster.

Checking Accuracy:

- I did not find any major mistakes.
- I compared the answers with my NCERT textbook and class notes.
- I checked important facts before using them.

Why We Should Check AI Responses:

- AI can sometimes give incorrect or incomplete information.
- It may not always provide the latest or correct facts.
- Teachers and students should verify AI answers using reliable sources.
- Critical thinking helps us use AI safely and responsibly.

Conclusion:

Generative AI is a helpful tool for learning and teaching, but its answers should always be checked before using them.
